The Eisenhower Matrix

	Urgent	Not Urgent
Important	**Do:** • Read user commands with the dining court name in Discord. • Send an HTTP GET request to the Purdue Dining API using today's date. • Parse the JSON response and filter vegetarian options. • Send the formatted list in Discord. • Handle errors like closed/misspelled dining court or API being down.	**Schedule:** • Support checking all 5 residential dining courts at once when the user does not specify. • Send an automated daily alert when favorite vegetarian foods show up. • Add extra filters for vegan items or specific allergens. • Add a command to show nutrition for specific dishes.
Not Important	**Delegate:** • Use discord.py to connect to Discord and read chat commands. • Use Python's requests library and built-in JSON parser. • Use Python's built-in datetime library to format today's date • Use python-dotenv to load the secret Discord bot token.	**Delete:** • Building a separate mobile app or web dashboard. • Using machine learning to recommend meals. • Tracking daily calories and macros for the user.
